

PART 1 Academic Program
ส่วนที่ 1 กิจกรรมเรียนรู้วิชาการ

Tokyo Institute of Technology (Tokyo Tech)
July 8th, 2015

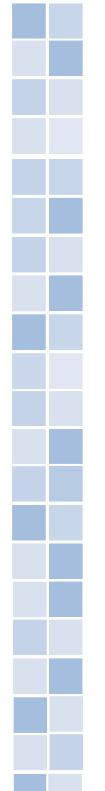

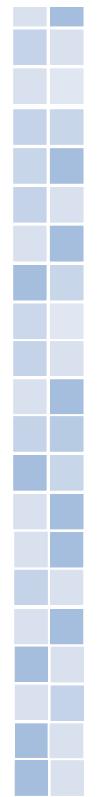

กิจกรรมช่วงเช้า เริ่มจากการฟังบรรยายแนวโน้มเพื่อวิเคราะห์แบบการศึกษาใน Tokyo Tech เพื่อให้บุคคลซึ่งได้เป็นคณาจารย์และนักศึกษาเพื่อให้นักศึกษาได้ติดตามเรียนรู้เชิงลึกและทำง่ายรวมทั้งนักศึกษาและวิจัยในสถาบันเทคโนโลยีนี้ ต่อมาเข้าห้องเรียนฟังบรรยายพิเศษโดยผู้เชี่ยวชาญทางด้านน้ำที่มหาวิทยาลัย Tokyo Tech

กิจกรรมช่วงบ่าย ร่วมกับ Group Discussion ร่วมสนับสนุนศึกษาดูงานไปทัวร์ห้อง Natural Disaster and Chemical Engineering มีจุดประสงค์หลักเพื่อให้นักศึกษาได้ติดตามเรียนรู้เชิงลึกและทำง่ายรวมทั้งบุคคลซึ่งคุ้นเคยและต่างหากความคิด วิธีการและวิธีการเรียนรู้ และภาษา ได้ตระหนักรถึงความหมายและทำง่ายของมนุษย์ศาสตร์ในสังคมอื่น สำหรับหัวข้อห้องเรียน เป็นภาษาบล็อกเป็นที่รู้ดูเหมือนห้องเรียนที่จะนำความรู้ในเวทีปัจจุบันและอนาคตมาสังคมในวงกว้าง นักเรียนสามารถร่วมมือร่วมใจและร่วมมือกัน

กิจกรรมช่วงเย็น เป็นการพบปะพูดคุยบ่มเพ็ญศักยภาพไทยที่กำลังศึกษาที่ Tokyo Tech เพื่อให้นักศึกษาได้ทราบและเรียนรู้ตัวเองเพื่อศึกษาต่อ การปรับตัวและเตรียมตัวเข้าสู่ชีวิตในประเทศไทยเป็นไปอย่างมุ่งมั่นของผู้ที่กำลังศึกษาอยู่ในปัจจุบัน

รศ.ดร.ดวงนล ณ ธรรมจ

Group Discussion: Natural Disasters & Chemical Engineers
สัมมนาแลกเปลี่ยนความคิดเห็น: ภัยพิบัติธรรมชาติับวิศวกรรม

Student's Impression ความประทับใจของนักศึกษา

It's my first time visit the university in Japan. It makes me realize how important of higher education such as the master degree in Japan. Tokyo Tech has a great library nicely design and good facilities, which I am so glad to have a chance to visit. I am also in love with the laboratory working on the applications of peptide, it made me so excited.

Maethaphan Ruengprapakijsee

Tokyo Tech is one of the best universities that have ever seen in my life. The environment and researches are very nice. Professors I met are also very kind. I can ask everything that I suspected. I had a chance to see part of research in the chemical engineering, which I have been enthusiastic. In addition, some technology such as the solar cell technology also motivated me to be a part of Tokyo Tech for higher education.

Tasapon Pramunkosonut

At Tokyo Institute of Technology, I was really impressed in their building, which is really beautiful. They also apply their research to practical use in the university, for example, they apply the solar cell to make energy.

Thanutchaporn Bhamarasuta

For Tokyo Institute of Technology (Tokyo Tech), I really like about how students learn. Their education system is like a master degree. I think after they graduate, they will be good engineers. I also love Tokyo Tech's library. It is beautiful and suitable for studying. I think I will success in my life if I study at Tokyo Tech.

Siwat Valeekatkul

At Tokyo Institute of Technology, I was really impressed in library. The library is beautiful and suitable for students to review lessons. Moreover, the library and others building were designed to be very strong in order to prevent building collapse when it has earthquake.

Natural disaster brainstorm is a good activity because I got new knowledge that I have not known before from Japanese students.

Watcharapong Inpakdee

I was interested in various researches at the Department of Chemical Engineering. The researchers try to improve the understanding in their research field. In addition, the Department of Chemical Engineering of Tokyo Institute of Technology is the one long establish education system in Asia. I definitely think that studying in Tokyo Tech the student will get a very broad perspective and also it's a multicultural society, so they will get to build the global network. Also, they will get global recognition with a degree from the Tokyo Tech.

Chinakrit Laddadok

Thank you Tokyo Tech for teaching us about critical thinking which is the important thing for improve thinking method of engineers.

I would also like to thank you new friends from TIT for meeting and culture exchange. I'm very happy and thank you again for everything that made us to meet. I hope in the near future we'll meet again in master level.

Satapan Phapataninun

I would like to say thank you to faculties, staffs and students for giving me new experiences during my visit at Tokyo Institute of Technology. I have been impressed by the technologies in the laboratory, which graduate students showed me. At the modern-design, cheesecake-like library is so amazing and equipped with high technology. The relaxing view in the garden, and I would like to say that it is my pleasure to meet the students from Tokyo Tech and had a discussion to each other.

Jirayu Lochanachai

Firstly, I would like to say thank you to all of you for taking care of us since we arrived. Visiting Tokyo Tech gave me many benefits and experiences. I've seen wonderful surroundings around the institute, such as high-technology laboratories and comfortable library. Tokyo Tech has great social surrounding as well. The students I have met are very polite and friendly. The activity you provided for us was great. I think I'm actually do love Tokyo Tech and want to study abroad at this place. So I hope that it will come true. Finally, I'd like to say thank you again. I'm very happy to be there.

Attwich Anantkitthamong

First of all, thank you for everything that you taught me about university in Japan such as research projects, instruments, technology and new experiences for meeting new friends in Tokyo Tech. After the visit at Tokyo Tech, I gained new knowledge and had a chance to precipitate my dream when I was a child.

Sarawut Sripichai

Tokyo Tech was the first place we visited. A lot of mistake we had done. But everything could pass pretty well. I got some Japanese friends over there. They are really cool. Activities we did together were really fantastic. Also their laboratories are great. There are high technology and interesting experiments.

Ratchanon Rueangdechawiwat

It is the first time to go to the university in Japan for me. Tokyo Tech emphasized me that they are one of the famous universities because they have many state-of-the-art research and high technologies. The library is very cool because of high technology as well as the architecture (both inside and outside). Here, I had the opportunity to discuss with Tokyo Tech students about the natural disaster. It was also the first time to work with Japanese guys for me. It made me know that not only wise, they also have critical thinking skill. Thank you so much for giving a warm welcome to Thai students.

Nattapat Sarankura Na Ayudhya

I would like to express my appreciation to faculties, staffs and students for your welcome. The discussion activity provided me an opportunity to know new Japanese friends and to learn how to work as group with Tokyo Tech students. It was a good experience. Thank you so much for giving us the opportunity to visit your library. It's a very interesting place.

Peerapon Bumpen

Student's Impression ความประทับใจของนักศึกษา

Tokyo University of Science (TUS)

July 9th, 2015

TUS is the good university that I think if I study here, I will be good at science. It was nice to visit facility center and to listen to presentation about on-going research in TUS laboratories.

Maethaphan Ruengprapakijseere

Tokyo University of Science is another university emphasizing on science and technology. They have so many advanced research lab and facilities. Students are very friendly. They tried to explain everything that we don't understand. I am interested in the polymer synthesis laboratory.

Tasapon Pramunkosyut

I am interesting in the laboratories of TUS since it has a lot of equipment that I have not seen before. Their project or research is very good and it can be benefit for our global in future. In addition, the lecturer explained and demonstrated clearly thus I gained many science knowledge, which I can apply in my study in future.

Thanutchaporn Bhamarasuta

Tokyo University of Science is the good university, which I have a chance to see several laboratories. In each laboratory have several projects that controlled by student who have experience. It let me think that I want to study more and more for the future which I want to have my own project and it will be the great thing in my life. Therefore TUS inspired me to study.

Siwat Valeekiatkul

การเยี่ยมชม TUS เริ่มจากการฟังบรรยายแนะนำโดยผู้เชี่ยวชาญทางด้าน化學 และภาควิชา สถาปัตย์
Chemistry จำนวน 12 คน ได้เชิญชวนพูดคุยกันแล้วเสร็จ ห้องปฏิบัติการวิศวกรรมคอมพิวเตอร์,
ชีวเคมีชั้นเดียว “สาร” ก่อนกลับไปต่อที่โรงไฟฟ้าในรัฐประทุมฯ สำหรับการตลาดวัสดุภัณฑ์ในวง
อาชารของมหาวิทยาลัยเพื่อให้นักศึกษาได้รับผู้เชี่ยวชาญทางด้านนี้มากขึ้น
ดร.ดร.ดวงฤทธิ์ มนัสจ

At Tokyo University of Science, I was so excited to visit science laboratories. In laboratories, researchers or students have researched and invented new technology to develop our life better. This knowledge is quite difficult for me. However, I think it is interesting. Thank you for your warm welcome.

Watcharapong Ipakdee

The Tokyo University of Science was established in the center of Tokyo. They welcome the international students. I was interested in various types of researches. They have many research centers and each laboratory has a lot of modern equipments.

Chinakrit Ladadok

Thank you Tokyo University of Science (TUS) for giving us the opportunity to visit the university, facilities and laboratories. I saw many master and doctoral degree projects, which ignite me to do my pre-project next semester. Science is the wonderful thing, which can change impossible to possible. Present technology makes from daydream in olden possible if we have scientific knowledge.

Satapan Phapatarinun

At Tokyo University of Science, it is a pleasure that I have gotten the new knowledge about the research in chemical engineering and the new perspective of learning in the higher education. I have a lot of new experiences here.

Jirayu Lochanachai

Industrial Promotion Organization (PIO)

July 10th, 2015

At Tokyo University of Science, I have seen many interesting laboratories and many analytical equipment. I'm so amazed about everything you do in your lab. It's a great innovation. I hope I can do that in my laboratory at the university as well. The most impressive memory at TUS is a time that we have lunch together at the canteen. It's such a new experience in Japan. At last, we would like to say thank you to all of you to welcome us so warmly and took care of us.

Attwich Anantkitthamrong

After I went to Tokyo University of Science, I received new knowledge about your projects that I have never seen. I'm interested in polymer-related project. Finally, thank you for project presentation from staffs and students as well as students that took me around.

Sarawut Sripichai

TUS is a private university in the city, which has many campuses. Faculties and students took care of us really well. All laboratories we visited are interesting. Both students and professors walked us through the lab and kindly as well as enthusiastically explained us. I gained a lot of new knowledge, which makes me much understand about how chemical engineering can do.

Ratchanon Rueangdechawiwat

Tokyo University of Science is very cool because there are many basement floors. They have many exciting researches going on such as using the part of shark and crab to produce the yarn for medical applications. They have many breakthrough technologies. Some technologies, I have never seen them. Thank you for your presentation about research and hospitality to Thai students.

Nattapat Isarankura Na Ayudhya

Thank you for your warm welcome at TUS. I got to learn the motto of the TUS from a nice presentation. It was also a great opportunity for me to visit your laboratories as well as to listen the presentation about on-going research. It inspired me to do my senior thesis next year. Thank you again for our meet!

Peerapon Bumpon

การพัฒนาระบบที่ Industrial Promotion Organization (PIO) มีวัตถุประสงค์เพื่อเปิดมุมมองของวิศวกรไทยที่เยือนักการท่องเที่ยวในการแลกเปลี่ยนเรียนรู้ในสถาบันนี้ ในการนำเสนอเรื่องราว "Monozukuri" ที่มีส่วนสำคัญในภาคธุรกิจ "Mono" ของประเทศไทยและอุตสาหกรรมของประเทศญี่ปุ่น นักศึกษาจะได้ติดตามเรืองคุณค่าของการพัฒนาเทคโนโลยีและวิศวกรรมและเทคโนโลยีของทางการพัฒนาประเทศญี่ปุ่น

รศ.ดร.ธรรมศักดิ์ ธรรมรงค์

Student's Impression ความประทับใจของนักศึกษา

The Industrial Promotion Organization makes me know about how the business works in Japan. It makes me know that if the big companies don't have a support from the smaller ones, they cannot survive. I got to learn new working attitude and philosophy. So now I think that maybe small company is the good way for working.

Maethaphan Ruengprapakijsee

Industrial Promotion Organization (Ota-ku) showed me how they can manage SMEs in Japan and the power of business in Ota-ku that leads to their signature "Mono Tsukuri" meaning the thing that another cannot do better than companies in Ota-ku. After hearing the presentation, my attitude about SME has changed.

Tasapon Pramuankosonyt

At the visit of Industrial Promotion Organization, I learnt about doing business in Japan that Japanese government supports small and medium enterprise since it is fundamental of big industries. Each SME has a very strong point in its expertise and this characteristic leads to one of the definition of business in Ota-ku '10 one else can do it but we can'.

Thanutchaporn Bhannarasuta

Industrial Promotion Organization taught me what is the strong point of Japanese business. It changes my attitude. In first time I think I must work for the big company but now if there was no SME, it means that big company will fail down.

Siwat Valeekiatkul

At visit of Industrial Promotion Organization (Ota-ku), I learnt how important of SMEs is and business management in Japan. This center supports SMEs to develop Japanese industrial. Each SME has excellent attitude in their work and this leads to make a good product.

Watcharpong Impakdee

I think Industrial Promotion Organization (PIO) is a small place but they have very high potency to improve their processing technology. They have a lot of the famous processing industry especially, the metal-related manufacturing. Furthermore, SMEs in Ota city are very active to develop their technology.

Chinakrit Laddok

Thank you Industrial Promotion Organization (PIO) for information about SME business. Small business is an important basis for large business. If small business isn't stable, big business won't be stable too. In Thailand, there are many SMEs but many of them don't have their own strength and don't contribute much to the larger size business.

Setapan Phapatarinun

For Industrial Promotion Organization (PIO), the introduction presentation gave me good and new ideas of supporting the small as well as medium-sized enterprises, which are composed of small (but yet powerful) amount of staffs, which are capable to stand through economics crisis situations, while contribute to one of a kind character to the Japanese businesses.

Jirayu Locharachai

Thank you for explaining me about SMEs in Japan. In your presentation, you have said that, Japan's SMEs have to make the things that no ones cannot make or cannot do it better. So, after this trip, I'm going to be the man that nobody can be same like me. Thank you so much for this tip.

Atwichit Anantikijhamong

After listening to about industry in Japan, you have changed my mind and provided me a new knowledge. Thank you for explaining me how the economies in Japan has been developed and how Industrial Promotion Organization (PIO) supports the small business in Ota-ku.

Sarawut Sripichai

Ota-ku made me know more about how business runs in Japan. At first I had thought it is hard to understand about this but they explained us in a way that we can catch up nicely. Also the knowledge we got can be used to develop our country as well.

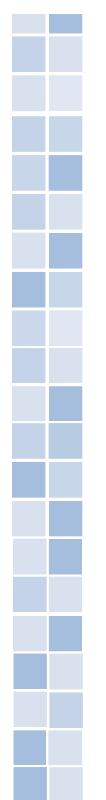

Ratchanon Rueangdechawiwat

Industrial Promotion Organization is like the head office of SME in Thailand. Ota-ku makes me to know the history about business in Japan. Why the small firm can survive regardless of economics situation because their small firm can produce something which they are the only one can do it and do it the best in the field. It is called "monotsukuri". Thank you so much for the knowledge.

Nattapat Isarankura Na Ayudhya

Thank you for your hospitality at Ota-ku Industrial Promotion Organization. I have been amazed after listened to the presentation introducing the history of Ota-ku industrial estate and how business in Ota-ku could survive during the change in the world economics. I am no wonder why much know-how is invented in Japan. I have learned a lot of new thing here. Thank you for our meet!

Peerapon Bumpen

Student's Impression

ความประทับใจของนักศึกษา

Nosaka Denki
July 10th, 2015

The company taught me that if you think you can do it, you will finally be find the way to do it. I also learnt about the coating technology, which employs the chemical reaction. It introduced me another aspect of chemical engineering.

Maethaphan Ruengprapaijiseree

Nosaka Denki is the example representing the powerful SME. The company fabricate the coating machine with their own technology "no one can coat like us" they said and I wonder about almost technology they create by their own but unfortunately when we came they have already sent the machine to the customer. But the owner is very generous and clearly explained us everything. Thank you for your kind hospitality.

Tasapon Pramuankosyut

I was really impressed in the company presentation. The owner, Mr. Nosaka, is sincere and his explanation is very clear. In my opinion, Nosaka Denki is one of the great companies since the company can develop the software, which I think it is difficult to fabricate it.

Thawutchaporn Bhamarasuta

Nosaka Denki shows me that everything begin from nothing. It will be a great thing like their machine, which they began from using their expertise to build the prototype that the big company needs. Even the company is small, but they have passed through several crises beautifully.

Siwat Valeekiatkul

I was really impressed in your ability to organize your company. It is fantastic that you can design and create instrument and product by yourself. Although your business is not large, your efficiency is as good as big companies. Thank you for your warm welcome.

Watcharapong Ipakdee

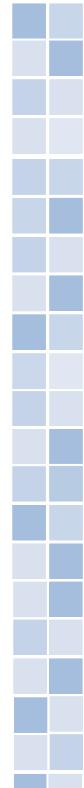

I think Nosaka Denki is a very high performance company because it's a small company but they can develop the state-of-the-art plating machine for many plating companies in the world. I was very impressed in the visions of the company owner, Mr. Nosaka. He is a very good leader. He can do everything and is still active to develop the plating method. This company is the very good model for other SMEs.

Chinakrit Ladadok

Thank you Nosaka Denki for make me so impressed about know-how you have developed as well as legend you have carried. I think your engineers are mega clever that can make any machines, so I will be a good engineer who come up with my own know-how and use it for develop our world.

Satapan Phapatarinun

I have been amazed and impressed after hearing the company's legend at Nosaka Denki from Mr. Nosaka. This visit taught me that don't judge anything by looking only the size but need to look inside. If you are the one and only in the certain technology, everyone will come to you. Jirayu Lochanachai

Yamato Spring Corporation

July 10th, 2015

Nosaka Denki is the small firm in Oita-ku but they can produce something that other firms cannot such as coating the Nikon lens. It amazes me because I use the Nikon camera but I do not know the technology of camera and lens. Now I know it. It is very fantastic. When the lens is used to zoom, the focus will be changed. So Coating of the lens by Nosaka Denki helps it to remain the focus. Thank you so much for the knowledge and sharing us the company's legend.

Thank you for giving me the knowledge.
you have the best know-how technology. You
inspired me to create my own know-how.

Thank you for everything that you told us about the factory from past to present. It was very impressive. Plating technology as well as the fabrication of prototype developed in your company are amazing. You have demonstrate a Japanese spirit. Thank you for everything.

Sarawut Sinpitchai

Doing everything always runs into a problem regardless of company size. But never giving up and being strong is what we learned from Nosaka Denki. The manager and his team always believe in themselves and what they can do. In addition, their attitude is great. Most of us want to grow up like Nosaka denki has been doing.

Thank you for your warm welcome at Nosaka Kai as well as the introductory to the company. Thank you for explaining us about the electrolytic method for coating and teaching us about how to do a business with changing the world. I deeply admire your philosophy. You are a very strong company and I hope to be a part of company like this in someday. Thank you again for our meet!

Peeranon Bummen

Ratchanon Ryeangdechawiwat

ପ୍ରକାଶକ ପତ୍ର

Before visiting Yamato Spring, I have never known what spring is used for, I only know that it is a part in a pen. But after visiting the company, they showed me the usage of spring and how they are made. They built their own machine that inspire me to try to make my own work.

Maethaphan Rueengprapaijseret

Yamato Spring is another SME in Ota-ku district we had a chance to visit. They are "Mono Tsukuri" too. Their product has the best quality. The staffs showed us several types of springs and their usages. They also took us to the manufacturing part to see the actual process. I was amazed by how they can design very complicated machines.

Tasapon Pramuankosonut

I really like the machines at Yamato Spring because it is amazing that engineers in this company can create the machine by themselves. Staffs explained clearly thus I got new knowledge about spring.

Thanutcharaporn Bhamarasuta

I was impressed from what they do in small but yet very strong company. They showed me what spring is, what the function of spring is and how spring can engineerly design. I heard they fixed the machine that they build when they showed us the process.

Siwat Valeekatkul

At visit of Yamato spring, I was so excited to see your machines that you invented. I think the process is really amazing. In addition, I learnt the difference of each type of springs and its application. Thank you for your warm welcome.

Watcharapong Inpakdee

Yamato is a good model of SMEs because they have a smart management in small area. I am very excited about ability of the machines for spring production. They give me the knowledge how to use the various springs.

Chinakrit Ladadok

Thank you Yamato Spring for giving us a chance to visit, your machine is so cool. I think an engineer who build them is so smart and mega clever because machine's system is very complex and wisely designed. Although you are SME business but I think you are Jack who kills the giant.

Satapan Phapatarainun

At Yamato Spring Corporation, I learn about business ideas of methods to create the many types of spring for various uses. The machines that work fast and accurate, while providing high quality products, have also amazed me.

Jirayu Lochanachai

Your company is very wonderful, I actually like it so much. I'm very excited to walked around the company and saw many working machines. I think that, the machines are very high-technology. I never see anything like these before in Thailand. At the company rooftop, there is the most beautiful sea view I have ever seen. So, thank you for your kindness for allowing us to walk around as well as your hospitality. When I see one of springs anywhere, I will certainly think of Yamato Spring.

Attwich Anantikiththamong

Thank you for presentation and knowledge about method to make a spring that I have never seen. I'm excited every time when I got to know process to make each spring. And thank you again for great view that I can see from your rooftop.

Sarawut Sripichai

Although the size of company may not large, what Yamato Spring is doing is what the big company cannot do and cannot outdo Yamato Spring. I really like the company like this - business, process, products, staffs and the view!. The staffs gave us very warm welcome. They made me feel like they are family

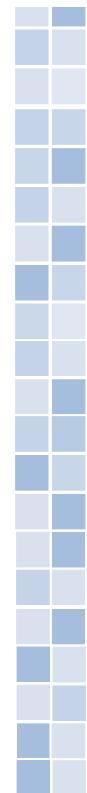

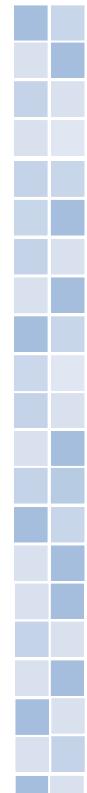

Ratchanon Rueangdechawiwat

Yamato spring excites me because they have many breakthrough technologies that I have never seen them such as producing the spring. It is very exciting. The firm makes me to know a lot of type springs and how to use them. Thank you so much for the knowledge and the warm welcome.

Nattapat Sarankura Na Ayudhya

Thank you for your welcome at Yamato spring, introduction to your company, presentation about how to make a spring and application of each spring. I was very excited when you showed manufacturing process and took me to see a beautiful view of Tokyo. Thank you again for our meet!

Peerapon Bumpen

Student's Impression ความประทับใจของนักศึกษา

Ildemitsu Kosan Co., Ltd.
July 13th, 2015

July 13th, 2015

Idemitsu is one of the biggest companies about refinery plant in Japan, which I am so glad to visit. The staffs showed me a lot of thing that company in Thailand has never show us for example seeing inside the reactor. Beside the plant tour, I was also impressed by their training system.

Maethaphan Ruengprapaikij seree

Idemitsu is a powerful oil and gas company in Japan. During the visit, the staffs showed us the history, management and business line. It is the all-in-one company. We have the opportunity to visit one of the operating units, in which I was impressed by their attitude. We also got an opportunity to see the inside of the furnace heater unit, which I have never seen it. I am really glad to have a chance to visit idemitsu.

Tasapon Pramuankosonyut

From plant visit, I was really excited to see the refinery process that I have not seen before. I think it is a good chance for me for my future because I am studying in petrochemical engineering. Staff is friendly and his explanation was clear. Thank you for warm welcome.

Thanutaphon Bhamarasuta

Iemitsu is the biggest company that I have ever visited. Staffs showed me a lot of thing and I can learn what I can do when I work at a plant. Iemitsu is all in one company. They have upstream, mid-stream and down-stream. They told me that I can learn all of plant in Iemitsu. So this is one of company that I want to work in the future.

Siwat Valeekiatkul

I was so excited to visit petrochemical refinery at Idemitsu Kosan. Staffs explained clearly thus I got new knowledge about petrochemical process. In addition, staffs showed me about the real process and the safety. I saw the flame in furnace. That is great!

This is the first time for me to see the refinery plant very closely. They showed distillation system and an environmental conservation. I was very excited to visit the surrounding area, where I can see the method for transferring crude oil from the ship. I think idemitsu is the high performance company in the fields of operation management, equipment control and safety management.

Chinakrit Ladadok
Salaan Phaparatnirun

At Idemitsu, I leaned about the refinery of crude oil and related petrochemical products. I also like the working attitude of training new-coming staffs to become experts in all working aspects.

Jirayu Lochanachai

Tokyo Incineration Plant

July 14th, 2015

Idemitsu is the huge firm, which produces the product from the crude oil. I have never seen the firm which can produce many products like Idemitsu in Thailand. The firm impresses me because I cannot see inside the plant in Thailand however Idemitsu staffs showed me the furnace unit. It is very cool. It is the first time to see real unit operating in petroleum refinery. Thank you so much for the knowledge.

Idemitsu Kosan is the biggest petroleum refinery I have ever seen. Because I study in a Bachelor program of Petrochemical Engineering so I'm very interest in idemitsu Kosan which has both petroleum refinery and petrochemical plant. This place is also the first time that I have seen the real furnace in the refinery. Thank you for the plant tour, I'm very excited for that.

Thank you for presentation on history, company management and training Idemitsu's first factory that opened the furnace to visitors, which even make me more deeply interested in refinery process such as how to transport crude oil. Thank you again for this meet.

Thank you for your welcome, company introduction, as well as showing me a petrochemical product. I appreciate the staffs that took us around the plant. I have never seen inside of the working reactor before. It's very wonderful. Thank you for giving me a great opportunity.

Idemitsu is a large company that do everything about oil, from down to upstream. At this place, it was my first time to get into the plant as a chemical engineer. Thank you for welcoming us.

Peerapon Bumpon

In Japan, the incineration plants are the important plants. They know how to separate the trash and then incinerate it for making the power for people in the city. Hope we can build it in Thailand, so that we can make more power for all people in the city. I think it's important to classify the type of rubbish. If Thai people can do this, then I think we all can make our own incineration plant in the future.

Maethaphan Ruengprapakijsee

Tokyo Incineration Plant is one of the important plant which I was lucky enough to visit. Here the staffs explained us how they change trash to power and slug. They can produce power around 50 MW, and their slug can be used as landfill. Although it is the incineration plant, the surrounding environment is pretty nice and clean. I think Thailand really needs the plant like this because poor garbage management is a big problem in Thailand

Tasapon pramunkosonuy

It is interesting that waste can be made land in Japan by recycle. I learnt how importance of waste separation is. The waste separation is a way to separate a combustible waste and an incombustible waste which both of them have different method to recycle. Now, I recognize the significant of waste segregation and I hope one day my country will have a good waste treatment system.

Thanutchaporn Bhamarasuta

When I was young, I saw the discovery channel. The incineration plant is the best in the world. Now I got a chance to actually see it. I was really impressed. I can see how they work. Incineration plant is very useful for today and for the future. So I hope that in Thailand will have the great incineration plant like Japan.

Siwat Valeekitkul

At Tokyo Incineration plant, your presentation is pretty good and it is easy to understand. I have seen the process of waste removal in detail. I learnt the waste management in Japan and process of waste separation that I think it is interesting. Thank you for your warm welcome.

Watcharpong Inpakdee Joe

I think Tokyo Incineration plant can be a model of waste management for Thailand. It provided the importance of waste treatment in Tokyo. I am very impressed by the discipline of Japanese people on how necessary of the environmental conservation is.

Chinakrit Ladadok

Thank you Tokyo Incineration Plant for the presentation, explanation and plant tour. I got to learn about waste disposal system. I think that garbage and waste are important, because the more the people, the larger amount of the garbage produced. If we were able to transform every waste to energy, it would be very cool. The waste management topic is a problem in Thailand, if we were raising awareness in Thai people. My country will be more likable.

Satapan Phapatarinun

Tokyo model Incineration plant gives me the new perspective of cleaning the waste and alter it to energy to use inside the factory. There is also the ideas that is how to make our city better and cleaner, so it can make the people happy.

Jirayu Lochanachai

I've very excited to visit Tokyo Incineration Plant because I have not seen it before. I would like to say thank you for taking care of us and providing us clear explanation about the incineration process. I hope that one day, Bangkok will has the Incineration plant to eradicate large amount of trash. I will use my knowledge and my inspiration to make Bangkok better same as you have done for Tokyo. Thank you for everything.

Attwich Anantkithhamong

This is the most amazing factory that I have never seen. You can make use of garbage for energy and apply to make a new area. It changed my world about garbage, before I visit the plant I was thinking that garbage is very creep and worthless. After went to incineration plant I gained knowledge that garbage has valuable. Thank you for warm welcome.

Saranut Sripichai

Although we got to the incineration plant much later than appointment but the staffs kindly welcomed us and were willing to show us the plant and details. This place is impressive. I wish to have this type of plant in Thailand, like what the staffs mentioned to us.

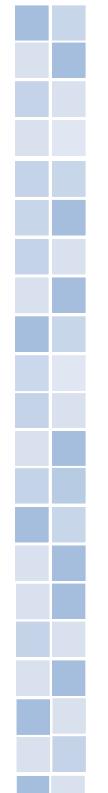

Ratchanon Rueangdechawiwat

Tokyo Incineration plant is the firm about waste to energy. The firm makes me know that Japanese has good discipline because they organized sort the garbage in order to produce the efficient energy. They convert waste to the more useful form, i.e., power. It is very incredible. I hope that Thailand will have the plant like Tokyo Incineration Plant in the future. Thank you so much for the knowledge.

Nattapat Sarankura Na Ayudhya

Thank you for your welcome, presentation about Tokyo waste management system. It is wise management system that turn waste to more useful form, such as energy as well as landfill. It's very interesting and thank you for show me a process of plant.

Peerapon Bumpen

PART 2 Cultural Exchange Program กิจกรรมแลกเปลี่ยนทางวัฒนธรรม

Kamakura
July 7th, 2015

พช.ดร.ตราภรณ์ ณ ชานوخ

Messages to SOA members

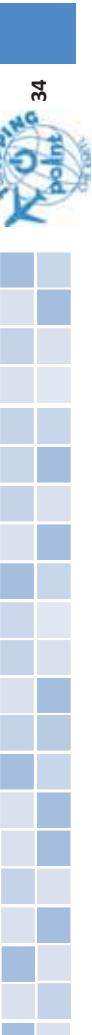

This is my first time that I have been to Japan. It is so beautiful! I feel good all trips which we have together, although some trip is so tired. I have learn a lot of Japanese culture. Japanese word. But the best trip of mine is the "public bath" with Tokachi and Master Kyohet. It is my first time to do this activity. I can say "I love Japan" from my heart. Thank you my friends and see you again soon.

AOF

First of all, thank you again for your attention and this is my first trip in japan. Since met the first day to the last day. After we have Activity together you have given a good impression and improve my speaking skill and I have seen things that I never saw before such as fireworks, tea ceremony. Finally, I don't know everything that I say without SOA.

From Koh

Attwich Anantkijithanrong (Big)

Message to SOA members

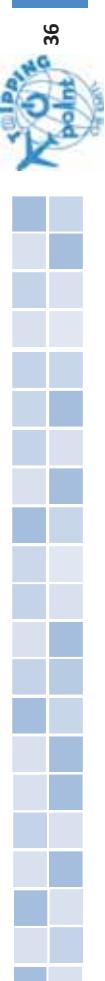

This is my first time I have been to Japan. I was impressed by almost everything in Japan. Such as the manners of Japanese, food, the culture and especially Fireworks. I have gotten a lot of good memories with you all SOA. I have learned a lot of Japanese words from you. Your kindness and friendly make us feel relaxing in the strange place. You bring us to visit many places that get a lot of fun. Also having good meals together. All of the meal are delicious. But in meals time I think you shouldn't have to pay for us. Because you have been helping us for many times and this will make us feel

uneasy. You gives the ideas and knowledge about the place we have been visited. Every place we went to are very good I mean I like them all. So I have to say thank you very much for guiding us in this Japan trip and I hope that there is a chance that we will meet each other again. Also the last thing tell Yuuta that I miss him and his family so much!

心から日本が大好きです。

Thank you very much

Message to SOA members

At japan, I was so excited to travel in japan. I can see the unique cultures such as tea ceremony, I was very impressed. In addition, Japanese people respect to traffic rules, it's a good thing. Moreover, I have a lot of experiences. Thanks to the SOA. Everybody are my friends and a guided tour around japan. I got many Japanese friends because we have same age. For the reason, We are friends easily. They made fun, when we stay in japan. It made me feel love this city very much. Thank you for your warm welcome.

Message to SOA members

It's my first time to go abroad. Japan is the first country where my first journey began. At first, I thought it must be a very difficult trip. But it's an easy first step. It's easy because all of you made it so much easier. So everything was done because of you. For me I don't have any comments. I just want to say I love everyone. So if you come to Thailand, the first thing everyone needs to do is tell me. Thank you a lot for your warm welcome.

AON (Jiro)

Message to SOA members

I think in this trip will not complete if we didn't meet you (SOA). Do you know you all are so friendly. You teach me a lot of things that we should or shouldn't do. Thank you for your attention, fire work and tea ceremony. I really enjoyed with it. I love when we drank at Yoshie's house. We are so close. I think the main topic which we talk is so good topic (Love). When I ask about shop that I want. You are so good you will search that for me. So I think you all are so good guys. Thank you.

Welcome Party (SOA) in Shibuya

July 11th, 2015

Message to SOA members

Since the first time we met until the last time we got back to Thailand, they had been taking care of us really great. And all activities we had done together were nice. But if I have to give some recommendation, I just want to tell them that they should not have paid for us about the meal and anything. But they already did. So thank you all so much again.

Maggie

First, I think all of SOA member are dedicated their time to take care all of us and I appreciate that, but I have something to comment. When SOA member and me in any situation, I have to open the conversation first and then we conversation will begin. I think SOA should to open some converse with me, and I think all of you (SOA) don't be shy, we like to talk to you in any time.

Thank you

Iasapon Pramuankoosoyut (Wei)

When I arrived to Japan the first thing, I was very impressed in your hospitality. SOA members take us to visit various places in Tokyo and try to introduce a lot of places we arrived. When I asked some questions but they didn't know the answer, they will try to find the answer for us. This is a good thing for me, but some time, I can't understand something they try to tell me because I don't familiar with their English. Anyway, it's not important for me. I think the most important for me is the experience, I learned how to accept and learn about new thing in other cultures. Because they share their perspective with me. I would say this is one very good experience for me.

iUR

I think the activity that we did together is great but sometime I think that when we shopping we so worry that it take to long time, so I think that maybe we can separate in a smaller group and have a free-time together.

Love, Ron

Tea Ceremony at Ms.Iimori's House

Fireworks at Fuchu Keiba Jou

July 12th, 2015

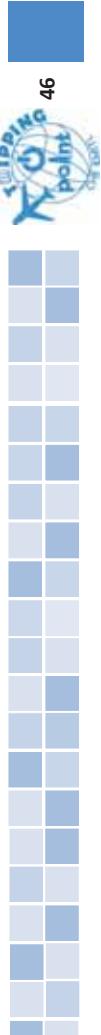

Messages to SOA members

It is so great. I have ever been to Japan such as Osaka and Kyoto but I had never been to Tokyo. So I did not know everything about Tokyo before. However, Sing out Asia group (SOA) is a good adviser. They were very well because I often asked them when I was curious something. Then, I always got the good answers. It made me improve the speaking skill too. In my opinion, SOA should adapt something like chatting because I had to ask something first and then the chatting would be begin. Sometime SOA should ask something first. Thank you so much for warm welcome and everything.

From Pup

In my opinion, activities with SOA members were pretty good because I got new friends who are friendly and nice. I was really impressed in your empathy. In particular, you took care and helped us when we had some problems. I really appreciate about this. In addition, I learnt new culture that I had never known before, especially tea ceremony. I got a lot of knowledge about Japan. Thank you for everything. Last, I want to tell you that you are awesome!

When I was in Japan I learned a lot of things. First, I learned about being on time. Unlike in Thailand it so different. Whenever I have an appointment like meeting or presentation, I cannot be late. But about meeting with my friends, I can be late for 30 minutes. Because I know if I'll be on time, I'll be alone for 30 minutes. But in Japan it's not like this. If I have an appointment, I must be on time. (I used word "must" it mean very important). Second, I will tell what I learned about public transportation. In Japan I know that most of the people take nap at the train or buses to save their energy. I like this thing because I always sleep when I go everywhere by public transportation. For rush hours, every people is in hurry. So you must be active always in everywhere. Third thing that I will tell you is about education system. It is so excellent. Because the first thing that I like is the way they teach the children very well. Every people in Japan thinks how to develop their country in a better way. For engineers they think how to create new things which will help to develop the world. So in my opinion, I want to discover new things like the fuel comes from plants. Therefore, I think Japan's education was the answer to my question.

Do you know that their temples are very beautiful? In Thailand we also have a lot of temples but around the temples have a lot of buildings too. So different from Japan. They preserve their traditional. Therefore, I like their country because I felt their tradition extremely. For the rest room it is very convenient and clean. I tried the public bath because my host introduce it to me. It felt so good. I was relaxed and feel better after the bath. In Thailand I hope there is a public bath like in Japan. It makes me think when I grow up I want my rest room in my house like in Japan.

Finally, I can say that I love their country because of their beautiful tradition. I admire Japan because of their respect to their tradition so for me I need to start it to myself and Thailand will be soon develop in a good ways.

I LOVE JAPAN. THANK YOU MY TEACHER AND MY FRIEND FOR THE BEST EXPERIENCE

ICE

Japan is the country that has the unique way and style. Their vision about traveling to make the economy grows by accepting non-visa traveler for 15 days makes the traveling to Japan become more convenience that can get a lot of money from traveling part of economy. Also the part of conservation of culture that is very interesting to join like what I have been to, TANABATA festival which is in 7/7 date that is long time tale which is very attractive for visitor. Also the activity that is made for people in the town to make people happy like fireworks. And the very important thing that is developed in Japanese is transportation. The transportation is very convenient and all together in the town and the payment method is also very convenience. Because of the good transportation then there is no discomfort about the traffic problems and the appointment can be direct on time by taking the local transportation. So it make Japanese people is very punctual. And the Japanese people are very kind and work hard. I saw just 2 workers in a small restaurant work quickly and very high responsibility to the customers and make them feel satisfy for the services. And the honest of the Japanese is very impress me about when I forget the money which is very small amount in the restaurant and the worker run to follow and return the money for me. The manners of Japanese is also the unique way of Japanese such as do not talk in telephone and make the loud voice inside the public transportation to annoy other people. Which is show how they care other people. The education in Japan goes in high potential in many university we have been visited. The government support the education system so students can use high technology instruments and support the students to do the new researches and develop the technology which is better quality to improve the life of the people in Japan. Also the university produces the graduated student with quality to develop the social in the better way with the critical thinking skill. Another is the library that is collects the knowledge, researches, textbooks, that is for the student to do the research in high technology organizing system so the student can easily looking for the information that they want to find out and learn. Furthermore the library has good environment to go and learn the new knowledge with good atmosphere in there. So this is why the university can produces the personnel with power and efficiency to carry out the country in the good way and be the top leader in the world. Also the business in Japan There is the organization that supports the SMEs which is very important part of the economic. To give the knowledge, technology and improving the welfare of the operators in the factory. So if the small business can run, the larger business also can and then the business expansion in both domestic and overseas by receiving and placing the orders to enterprises so they can produce their product and sale. And the special thing that make they can stand in the economic crisis is their unique way of producing the quality product that other business cannot produce like them is called monosukuri. So if the customers require any kind of product they cannot buy it from other brand. The development of the

small business can motivate the country's economic forward and become superpower country in the world. The other vision that I have been impressed is to make the land that is used for the factory planting to support SMEs and reduces the pollution that will spreads out to the living town to make the people take the least pollution that is effused from the plant. So to conclude that the reason why they became on this point, the superpower and developed country, because of they care about their people. They care about their human resource of being well. So the people can do their job and make the country developed.

DETCH

Before I went to Japan, I had much positive viewpoint about this country. Japan is absolutely perfect. When I got there and saw by my own eyes, I realize that I was right anyway. Since first till last, my positive prospect about Japan was getting much and much more. Whatever their discipline which we all could easiest touch, their cleanliness, their public mind and what they do for others is a really good example which we should too their education whatever academic and real life experience and especially teaching their children to have public mind is a strong point of Japan. Since Japan is a group of Iceland and as well as most of area is mountain and jungle. Being an advance economics country and a leader of Asia need all Japanese people's help. Thailand is one of developing country need to take a look at these good examples. Moreover Japan is one of the most developed country but they can still keep their manner, their culture, their belief as nice even the time has passed and their technologies are getting high every day or every second. Their culture, language and everything are still beautiful like before that all make me absolutely impressive. But somehow most of Japanese people are not pretty good at English. Because they have their own language same like Thai people. Including many public advertising sign, and menu in many restaurants are all Japanese which hard to understand for foreign people and visitors. But still Japan is one of the most impressive countries for me. And I can tell everyone that I love Japan

WAGGY

Japan is the developed country so it is very different from Thailand which is developing country such as high discipline, orderliness and high technology. Although Japan often experienced disaster, they could handle it because of high technology and good preparation. Before becoming the good country, people in this country must be good person. Japanese guys are not only high self-discipline but also punctuality. It made me know that why they are rush and enthusiastic all time. I could observe from people who I met such as SOA members, staffs in university or plant. They were very good at preparing something to present ours. In the society, I often met family in festival such as fuchu fireworks. There were a lot of families to watch fireworks in Thailand. I had never seen a lot of families to watch festival. Most came with friend or lover instead of family. Additionally, I would like to enjoy the party with Japanese people because it is so fun when you were chatting and drinking together. In the culture, I could only take part in some culture such as going to temple and tea ceremony. Temple in Japan is so beautiful. For example, Kamakura Temple, Asakusa Temple, Meiji Shrine, etc. The activities in temple were different from Thailand because of Legendary Tales such as getting the smoke in Asakusa Temple and then getting healthy. The next is tea ceremony. The tea ceremony is a ritual way of preparing and drinking powdered green tea called matcha. The guests enter through a kneeling entrance. The tea ceremony consists of the host bringing tea utensils into the room, offering the guests special sweets, and then preparing and serving tea which involves meticulous and intricate movements by the host and guests. The society and the culture made me know that Japanese guys very worked hard in task. However, they played hard in a party too. It means that you must have high responsibility for duty and you can do anything in the free time. In education, academic program in Japan made them not only wise, they also had critical thinking skill because I could observe from discussing the natural disaster with Tokyo Tech students. They often gave a good answer for my question. Moreover, they had more exercises program too. It can relax when you are too stressful to read a book. Ladkrabang should develop exercise program like Tokyo Tech. After plant visiting, it made me know that every firm had a big system to manage people to lead to success. Furthermore, some firm can produce something that other firms cannot. It is called "monotsukuri". Therefore, it is a reason why the small firm can survive regardless of economics situation. Finally, T@ipping point had changed my mind. It made me become a new man. I realize to improve Thailand better than now but I cannot do it alone hence we have to help each other. Thank you so much for T@ipping point and everything.

PJP

Japan was different enough from Thailand that I continually learned new things, but similar enough that it's was valuable experience for me. This is my attitude for several things in Japan. Japanese people are extremely polite and friendly. For example, the attitude when the customer receives from the shop attendants is unbelievable. Mostly Japanese people cannot speak English but you can impress Japanese people, if you can speak a little bit Japanese.

Japan is very safe place, with one of the lowest crime rates in the world. That is one very important point what I impress about Japan. I don't have to worry about somebody trying to pickpocket or steal my bag. In addition, Japan has an efficient public transportation network, especially within metropolitan areas and between the large cities. Japanese culture including traditional Japanese culture like Japanese tea ceremony, Japanese gardens and Japanese Language. I have had the opportunity to visit a Japanese tea ceremony tradition, Japanese people offered the Japanese tea ceremony experience to their guests, and I consider myself very lucky to have been able to participate in this beautiful Japanese tradition.

Japan has very high-quality basic education most young people receive by the time they complete high school. In addition, Japan has one of the longest established universities in Asia such as Tokyo Institute of Technology or Tokyo University. They were famous in science and technology, more than students come to study in these universities. I think that studying in Japan they will get a very broad perspective. There are multi-cultural societies, so they will get to build this global network. And also, they will get global recognition with a degree from Japan.

I think the Japanese people are very work hard due to their social value. I do think many Japanese people devote a lot more time to their jobs. The people are sleeping on the trains, this is course due to overworking. After, I have had the opportunity to visit Japanese companies, I found that all companies have a little employee but they have very high potency to improve their processing technology.

TOR

Learning from This Trip

ສັນຖາໂຄຣຍົງຈາກໂຄຮກຈາກຮ່າງ

Japan country

Japan is country that have less of natural resource but it not a problem to develop their country because Japan government see how important of developing human resource that why Japan development so rapidly. Just shortly after World War 2 Japan was comeback to be powerful country in the world.

Japan people

I don't know, Have Japanese people organized from the start? But also that I see Japanese people in this time most people are organized and punctual and do not exploit others, which is critical to the development of Japan's era as easy as possible.

Japan culture and social

Japan has a fascinating and multifaceted culture on the other it is a society in a continual state of rapid flux, with continually shift fad and fashion and technological development that constantly pushes back the boundaries of the possible.

Japan Education system

Japan has placed at on near the top. The roots of this accomplishment run deep. An island nation, Japan developed over the centuries in isolation from the west, though in most arenas, its achievements compared favorably, not least in their level of literacy.

Japan work system

Work in Japan they have many opportunity to success in high level because the rules of the systems were working well. But will bring a lot of pressure at work. The often heard that someone committed suicide by jumping into the tracks in Monday morning because not withstand the pressure.

WEII

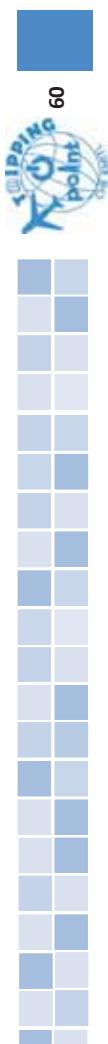

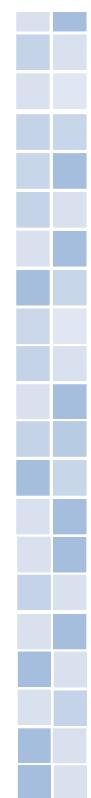

the script since they wanted to be punctual in their presentation or demonstration. Another reason is most of Japanese always think that their English skill is not good. Hence, they worked hard in order to present us in English. All of Japanese uses freedom based on social responsibility. They always consider public interest. Japanese people are well-disciplined. They respect law and rule. To illustrate, if they want to go across the road, they must go on the crosswalk when traffic light turn to green color only. Besides, they always queue up, for example, they line up to enter the vehicle or purchase something. Japanese always think and do for their country first. One of my impressions in Japan is about waste management. At visit of Tokyo Incineration Plant, I learnt the way of waste management. Every family must be responsible in their waste by waste separation in order to recycle easily and dump waste follow the plan of incineration plant. This waste recycle leads to make a land in Japan. By reason of social responsibility, Japan is one of the best orderly countries.

Despite lots of high technology, Japanese people still maintain their custom and tradition. Manner in public is important thing. In particular, they do not irritate others people in public transportation. In addition, if you have a backpack, take it off before you board and carry it by your feet or put on shelf in order to prevent accident. Greeting is one of the necessary manners. Japanese people always bow, especially to seniors who are more superior to you. Most of people are conservatism and these results in the attitude that they want their country to be the best.

Education is base of country thus all of Japanese kid must go to school. At visit of universities including Tokyo Institute of Technology and Tokyo University of Science, students study hard and learn a lot of fundamental knowledge in order to prepare research. In senior year, students must do a research. This research is beginning of great technology and new knowledge to develop Japan. Japanese people are quite serious thus they always work hard and response in their work. "No one else can do but we can" is the attitude of Japanese people in work. In particular, small and medium enterprises have this attitude and this result in their efficient work.

All of the reasons are the main factors that develop Japan to be one of the best countries in the world. In my opinion, Japan is exquisite and spotless since everyone in this country has a good attitude to do for their country. Besides, they adhere to fraternity and respect for differences which I think it is really important in our social. Finally, I hope one day Thailand will change to be one of the best countries like Japan. We have a lot of good things in our country. I believe that if everyone in Thailand has attitude to do for our country and dare to change ourselves, Thailand will be great country.

Bonus

Learning from This Trip สิ่งที่ได้เรียนรู้จากโครงการฯ

Japan is the most unique country in the world, went to Japan make me like the way that Japanese live. The social of Japan is the social that respect the authority of other people, so the Japanese rather respect the Law and not exploit other.

In my Opinion, because Japanese live in social and culture that treat people to not exploit and have self-responsibility. I love the way that Japanese are always on time and make the plan, if we can apply in Thai we can be grown up and make Thailand move to the great way such as Waste Segregation to transform into ashes then use the ash to make more land

This trip teach me how the educational system work in Japan, in Japan they usually study the master degree so they spent all the time study and do the laboratory. The project in their laboratory, they can apply in their country such as the Solar cell in Tokyo Tech.

Finally I wish I'll go to Japan again and learn more about Japan. The trip teach me a lot such as to be on time, self-responsibility, work hard play hard, exert in everything you do

PHONE

To japan

First of all, thank you to Prof. Kawasaki, Assoc. Prof. Duangkamol and Dr. Leeraporn that give me for the valuable time in Japan. Because this trip helps me to get more knowledge in my world view since the first day that I had been in Japan until the last day. Moreover, I can not now overestimate for example.

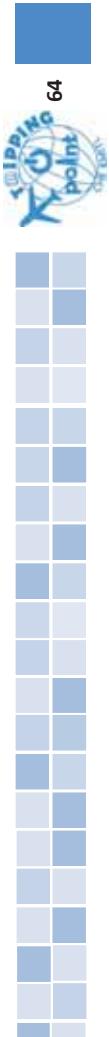

moreover I can get new experiences for example 1. Japanese culture: Japanese culture is different from my culture because Japanese people is more enthusiastic ,orderly and punctual these are as a good thing that I can get and I can adapt these to myself. also any cultures that I had seen for example crossing the street, the queues by orderly ,the traffic management also ,they almost use the electric train more than the personal car and many aspect that show the readiness in country developing . I hope that one day in the future, my country will develop people and orderliness like Japan

2. Education system: since I had visited any universities in Tokyo, I found that studying and learning more for the nation and the public can develop and grow the education and the economics by sharing and exchanging minds. This make the students have more enthusiastic in learning more also any environments may let the people develop themselves. The result is Japan succeed about the education because of this little point.

3. Working system in Japan: since I had visited any factories, I found one factory about working system that if you do that thing you should do it in the best way to developing the base to stable by using concepts and technologies for a growing of the country. And each factory have their own highlight that another factories don't have, this way can make

the factory stand by their own. By the way each factory almost don't give up with anything whatever it's a depressed economic, they will try to use knowledge to solve the problems and develop their own organization.
